Subject:	Totem Lake Mall Tenant Improvement – New Loading Dock	Sent Via.....	Fax <input type="checkbox"/> E-Mail <input checked="" type="checkbox"/>	Billing File <input type="checkbox"/>

Merlin,

As you have requested, DHP Engineering has reviewed (1) the new loading dock area; (2) the new 11' – 6" access opening in the north wall; and (3), relocation of existing door to adjacent place and installation of pre-engineered overhead bay door.

With regards to the new loading dock DHP has designed the retaining wall at the end with the upper loading dock and also the side condition without the surcharge load due loading equipment. See Details 1 and 2 for retaining wall configurations and calculations are included for city's reference.

Per discussion with you and city the wood sheathing has been exposed to show the typical nailing pattern at panel and field locations. The nailing at all areas was 12" to 13" o.c. and this wall would appear to be a non-structural wall due to nail spacing not being per typical wood shearwall nailing patterns. Above the new 11' – 6" opening is a 5-1/8" glulam beam spanning from an existing 7x7 steel column over to a seat on the exterior concrete wall. Therefore, no bearing load occurs on this wall. However, Contractor shall verify that the beam spanning over this wall is not retrofitted in any way as the The City stated some beams in this mall had some issues from previous snow storm damage. If beam doesn't appear to have been modified then loading condition is unchanged from original design intent of the structure and we don't have any further comments on this item. Contact our office for further review if beam varies from description listed above.

Concerning the door relocation item, contractor shall verify that the roof does not bear on the inset wall but bears on the same glulam beam line that aligns with the wall with the new 11' – 6" opening. If this is a bearing wall, contact our office for design of a beam and possible footing at this location. The new overhead door is a pre-engineered system and shall be installed per the manufacturer's specifications.

If you have any questions on the above items, feel free to contact us at 253-220-0484.

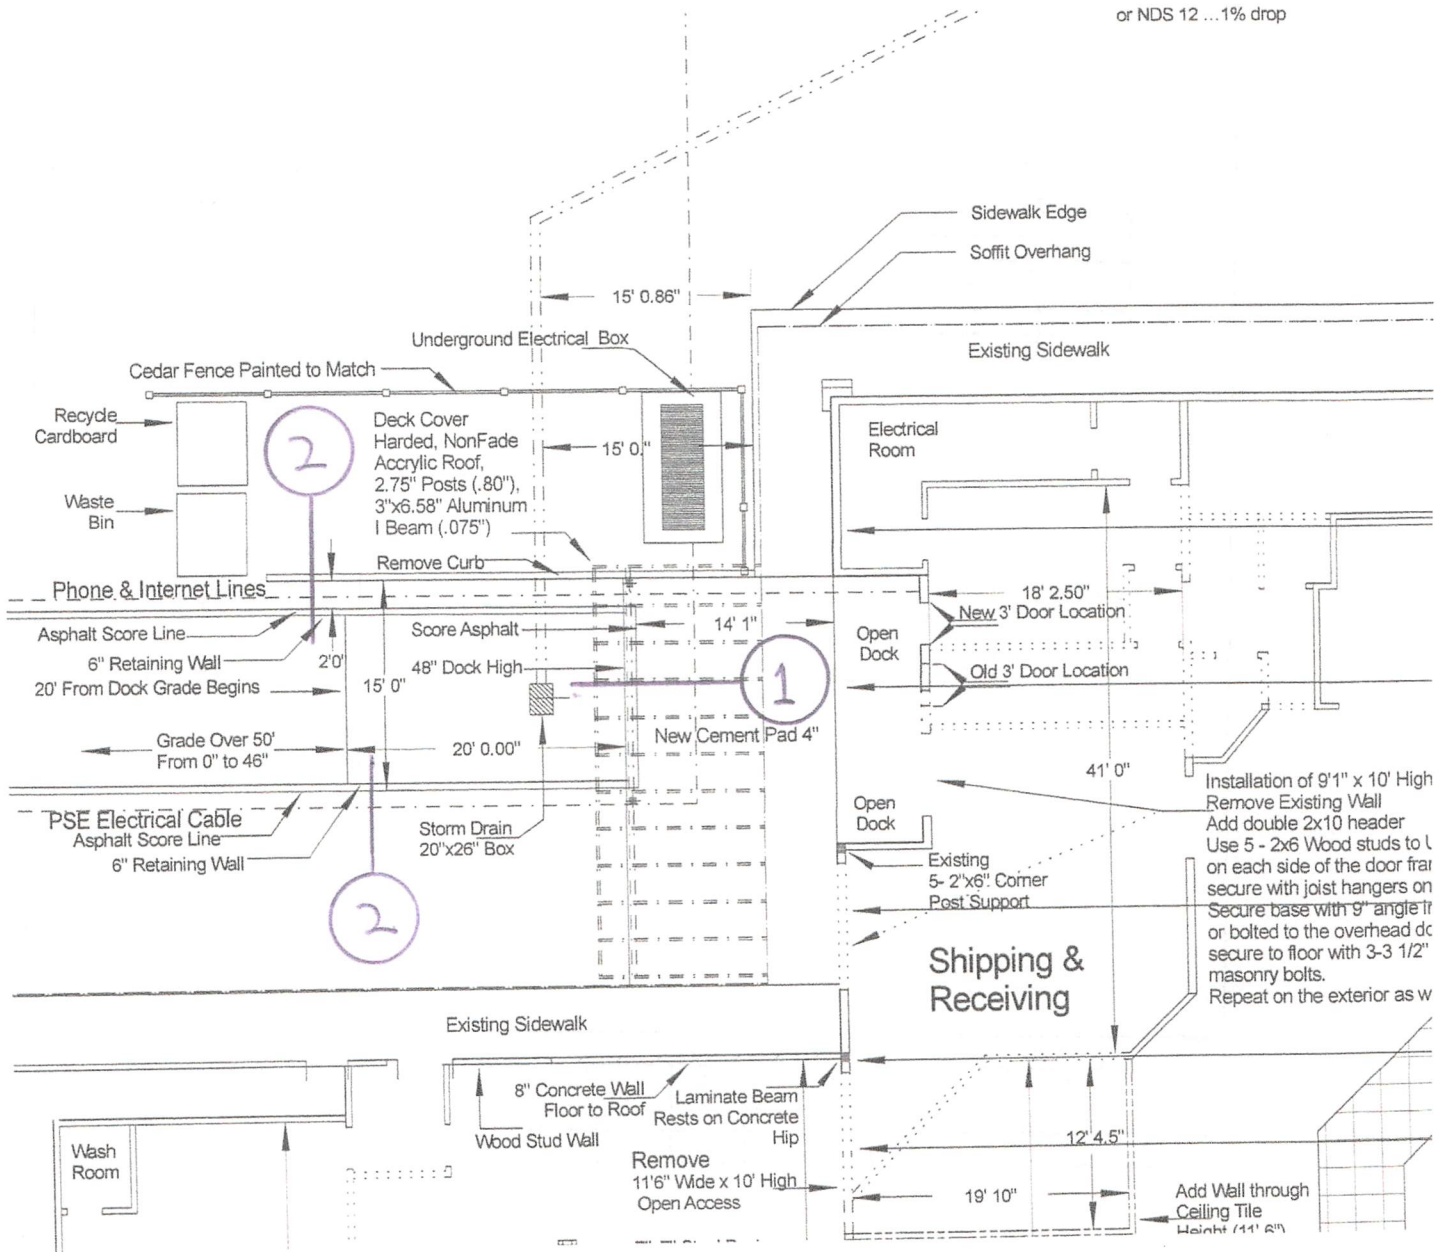

Sincerely,
 DHP-Engineering

Notes: 1. "H" = Horizontal loads. "V" = Vertical loads.
2. Vertical loads are positive down.

ULTIMATE STRENGTH LOAD COMBINATIONS (Concrete Design):

1.4D + 1.4H
1.2D + 1.6L + 1.6H + 0.5R
1.2D + 1.6R + 1.0L
1.2D + 1.6R + 0.8W
1.2D + 1.6W + 1.0L + 0.5R
1.2D + 1.0E + 1.0L + 0.2R
0.9D + 1.6W + 1.6H
0.9D + 1.0E + 1.6H

WORKING STRESS LOAD COMBINATIONS (Stability Checks and Masonry Design):

D + L + R + H
D + L + W + H
D + L + W + 0.5R + H
D + L + R + 0.5W + H
D + L + R + E/1.4 + H
D + E/1.4 + H

RETAINING WALL RESISTING FORCES:

 Allowable Soil Pressure = 1,500 psf.
 Passive Equivalent Fluid Press. = 250.00 pcf.
 Passive Soil Height = 1.00 ft.
 Coefficient of Friction = 0.40
 Cohesion = 0 psf.

Use Vertical Surcharge as Resisting Wt.? = No

Overturning Safety Factor = 1.50
 Sliding Safety Factor = 1.50
 Limit Reaction to Mid 1/3? = No

MATERIAL DATA:

 Concrete Strength, f'c = 2.50 ksi.
 Steel Yield Strength, Fy = 60.00 ksi.

 Concrete Unit Weight = 145.00 pcf.
 Soil Unit Weight = 120.00 pcf.
 Fence Weight = 10.00 psf.

REINFORCING STEEL DATA:

 Concrete cover to center of steel:
 Wall Inside Face = 2.50 in.
 Footing Heel (Top Face) = 2.50 in.
 Footing Toe (Bottom Face) = 3.50 in.

Minimum Ratios for Shrinkage and Temperature Reinf:

 Vertical Stem Reinf. = 0.0012
 Horizontal Stem Reinf. = 0.0020
 Footing Reinforcement = 0.0018

 SUMMARY OF RESULTS

10 OF 24

 DIMENSIONS:

Stem Height	=	4.00 ft.	Heel Length	=	1.50 ft.
Stem Thick. @ Top	=	8.00 in.	Toe Length	=	0.67 ft.
Stem Thick. @ Base	=	8.00 in.	Total Ftg. Width, B	=	2.84 ft.
Footing Thickness	=	12.00 in.	Key Depth	=	0.00 ft.
			Key Width	=	0.00 ft.

ANALYSIS RESULTS:

Max Brg Press. @ Toe	=	1,362 psf.	Sliding Force	=	667 Lb
@ Heel	=	0 psf.	Resisting Force	=	1,014 Lb
Allowable Brg. Press.	=	1,500 psf.	F.O.S.	=	1.52
Resultant Loc From C.L.	=	0.64 ft.	Overturn. Moment	=	1,250 ft-lb
Kern Point Loc., B/6	=	0.47 ft.	Resisting Moment	=	2,501 ft-lb
Limit Resultant To Mid 1/3?	=	No	F.O.S.	=	2.00

- Notes: 1. Stem moments are positive if they cause tension on the soil face.
 Negative if they cause tension on the outside face.
 Stem shear is positive to the left as measured on a section cut below the top of wall.
2. Heel moments are positive if they cause tension in the top of the footing. Heel shear is positive up as measured on a section cut to the right of the end of the heel.
3. Toe moments are positive if they cause tension in the bottom of the footing. Toe shear is positive up as measured on a section cut to the left of the end of the toe.
